

Welcome to Tutor Me!

To start viewing the website follow the instructions below:

1. If MongoDB is not installed on the current computer, please install MongoDB from their website. Once installed, go to the bin file of your MongoDB and run mongod (make sure to check that your database path is valid).
2. Unzip the a4p2.zip file and open your shell. Go to the root directory of the website in the shell - `.../nodetest1` - there should be an `app.js` file, a `package.json` file, and various other folders. Run an `'npm install'` to install the required packages.
3. In the same directory (`.../nodetest1`), run the command `'npm start'` in the shell. This should start the server.
4. In your favourite browser, go to `http://localhost:3000/` to view the site.
5. Enjoy!
